Planned duration | 4-6 months

## Phase II study to evaluate safety and efficacy of investigative medication in adults with generalized MG

### Objectives

- Support clinical trial recruitment in a fiercely competitive area for study sponsors
- Refer 15 patients over 4-6 months

### Results

- Ethics pack developed and IRB-approved within 4 weeks
- Referred 12 of 15 targeted patients for site screening in first 3 weeks of campaign
- Study ongoing (as of July 31, 2020), with recruitment timeline extended due to impact of COVID-19

### Screening process (*Days 1 to 90*)

50	30	20	90
INQUIRIES	PRESCREENED	REFERRED	DAYS

**Xperiome campaign projected to shorten recruitment timeline by at least 3 months**
